

Good morning residents

Further news received 7/31/25. The locker doors permit is now displayed in the office window.

The Crew will be onsite on the 8/5/25 to start removing the doors and frames, repairs and painting will then take place, Monday/Tuesday we will have a large dumpster placed in the overflow carpark and a container for the storage of the doors upon delivery.

For those that have still not emptied their locker please do so as soon as possible, anything left in and found by the crew will be discarded.

We still do not have a delivery date on the Electrical components, but speaking with the Electrical contractor it should be imminent. Once those components are delivered, we would expect a date around 2-3 weeks later for the electrical shutdown, they are already in contact with Duke Energy and permitting dept. so everything should be smooth going when they are ready to start. I will keep you all up to date when I have further information.

Thankyou

ANDREW and the Board of Directors.
