

BOAT LIFT RULES & REGS

A drawing or diagram with request for new boat lift needs to be submitted to the boat dock committee for approval. Once approved the application is then presented to the condo board for final approval.

Two permits are required from the governing municipality. One for the pilings and one for the electrical. A copy of these permits are required to be turned into the condo office.

Pilings are required to be bored in place and not pounded in.

All expenses for permits, installation, and boat lift are the responsibility of the right-to-use owner of that slip.

No floating boat lifts are allowed.

New boat lifts cannot exceed the allowed beam and length dimension of the dock space. See "Boat Dock Rules & Regs" for allowed boat beam and length.
